

Temperatures over the years > Global warming is a reality.

Outline:

- There were some years without data for Guarulhos city (1844-1850, 2014-2015) and the average of previous 10 years were used.
- Years before 1843 not shown due to large difference, attributed to inaccurate information
- Moving average is used (previous 10 years)
- Apple Numbers was used to create graph and analyse data.
- Decided to show temperature steps of 0.5 degrees Celsius as it could make it easier to visually calculate the increase over the years. Similar thinking was applied to the years, with steps of 5 each.
- Linear equations used to calculate 2100 temperature projections.
